RIGHTSLINK: COPYRIGHT PERMISSION GUIDE

Many publishers today use RightsLink to automatically process copyright permission requests, which makes it the quickest and easiest way to obtain permission for copyrighted material. If an online journal article or book chapter is a source of content you wish to incorporate in your manuscript, it is likely that there is a "Get permissions" or "Rights and permissions" link somewhere on the article's webpage.

This link usually leads to that article's RightsLink webpage which prompts you to describe what content you wish to use and in which way. Once you specify all necessary details using a number of drop -down menus, you will be informed of any fees you are required to cover in order to license the content. Most publishers don't charge fees for reuse of their content in scientific papers, but it is still a possibility. In any case, you have to give your personal details in order to finalize the process, after which you receive the copyright permission you sought.

The information that might not be readily available to you, but which you will sometimes be required to provide when completing your permission request is summarized below:

- Regarding the publisher of your new work: IntechOpen is a for-profit publisher.

- Regarding the format: Book chapters come both in print and electronic versions; journal articles generally come in electronic versions only.
- Regarding the duration of use: Life of current edition
- Regarding the lifetime unit quantity: 1000 to 4999 (including both print and electronic versions of your paper); 0 to 499 (print version only)

Should you be required any other information you are not familiar with, please feel free to email Mr. Ivan Šuljić at suljic@intechopen.com (include 'RightsLink' in the subject field). Provide a link to the publisher's webpage of a particular paper you are dealing with and indicate which information is required.

Below are some screenshots to help you locate the “Rights and permissions” on various publishers' websites. From top to bottom, the publishers are: AIP (American Institute of Physics); ACS (American Chemical Society); Elsevier; Nature; OUP (Oxford University Press); RSC (Royal Society of Chemistry); SAGE; Springer; Wiley; Taylor & Francis.
